See #7201 (comment)
#7201 (comment)
and around it. Some instructions on how to go about doing it.

Personally, I look at the change and if the change is simple , I merge it manually into the master
I have checked out.

I also did the following and it worked.

```
mchhil@DESKTOP-MKCA8HN:~/darktable$ git remote add jandren
https://github.com/jandren/darktable.git
mchhil@DESKTOP-MKCA8HN:~/darktable$ git fetch jandren
From https://github.com/jandren/darktable
 * [new branch]            30bit                          -> jandren/30bit

 * [new branch]           sigmoid_tone_mapping         -> jandren/sigmoid_tone_mapping
 * [new branch]           srw-makernote-bug            -> jandren/srw-makernote-bug
mchhil@DESKTOP-MKCA8HN:~/darktable$ git checkout master
Already on 'master'
Your branch is up to date with 'origin/master'.
mchhil@DESKTOP-MKCA8HN:~/darktable$ git merge jandren/sigmoid_tone_mapping
Merge made by the 'recursive' strategy.
 src/common/colorspaces_inline_conversions.h |   4 +
 src/common/iop_order.c                       |   2 +
 src/iop/CMakeLists.txt                       |   1 +
 src/iop/sigmoid.c                            | 329
+++++++++++++++++++++++++++++++++++++++++++++++++++++++++++++++++
 4 files changed, 336 insertions(+)
 create mode 100644 src/iop/sigmoid.c
mchhil@DESKTOP-MKCA8HN:~/darktable$
```
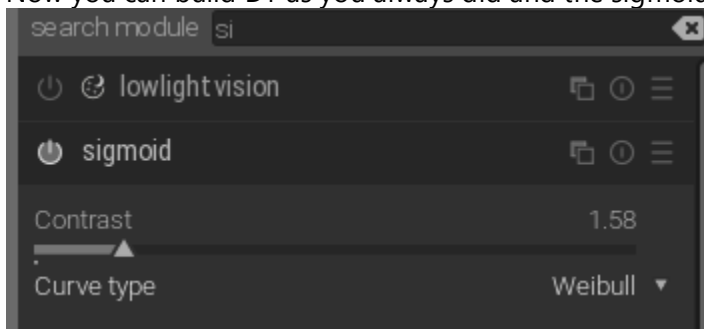

Now you can build DT as you always did and the sigmoid module will be available in the build.

### If you want to revert these

This will remove the merged files.
```
git reset --hard origin/master
```
This will show you the remote adds that you have done
```
git remote -v
```
jandren https://github.com/jandren/darktable.git (fetch)

jandren https://github.com/jandren/darktable.git (push)

origin https://github.com/darktable-org/darktable.git (fetch)

origin https://github.com/darktable-org/darktable.git (push)

This will remove the remote add we did earlier
```
git remote rm jandren
```
And you will be back to the kosher dt master branch.
